Human transmembrane proteins and nucleotide sequences.

Claim 4; Page 125-126; 139pp; English.

This sequence encodes a human transmembrane protein of the invention. All of the proteins exist in the cell membrane, so are considered to be proteins controlling the proliferation and differentiation of the cells. They may be useful as carcinostatic agents or as antigens for preparing antibodies against the proteins. The cDNAs can be used as probes for gene diagnosis and gene sources for gene therapy, as well as for large-scale expression of the proteins. The HP01498 (see AAV13939) protein may be associated with signal transduction associated with apoptosis, and therefore useful in inhibition of apoptosis. The HP01962 (see AAX13943)

This DNA sequence encodes a protein that has been putatively identified as a human transforming growth factor (TGF) alpha analogue, TGF-alpha-CHI This protein can stimulate analogues, embryogenesis, cell differentiation and function. It can be used for therapeutic purposes for restoration or enhancement of neurological functions diminished as a restoration or enhancement of neurological functions diminished as a result of trana or other damaging pathologies such as AIDS dementia and senile dementia, to treat ocular disorders, e.g. corneal inflammation, to treat uncours, kidney or liver disorders or to treat wounds, burns or ulcers. The polypeptide can also be used in the modulation of anglogenesis, bone rescribtion, immune response, and modulation of anglogenesis, bone rescribtion, immune response, and symptic and neuronal effector functions, or the arachidonic acid cascade. It can also be used in applications related to terminal differentiation e.g. in hyperproliferative disorders such as inflammation or pooriasis and for alopecia, or other skin conditions which affect hair treating tumours or skin disorders such as psoriasis. The products can treating tumours or skin disorders such as psoriasis. The products can also be used for diagnosis and detection of the above disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  122

retinopathy), neurological disorders (e.g. Huntington's chorea, Alzheimer's disease and Parkinson's disease), infectious diseases and/or for promoting wound healing, regeneration and/or chemotaxis (full details given in specification). Additionally, the nucleic acid may be used to produce the secreted polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. It may also be used as a DNA probe in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The polypeptides may also be used as antigens in the production of antibodies against TGF alpha HIII and in assays to identify modulators of TGF alpha HIII. The anti-TGF alpha HIII antibodies may also be used as diagnostic agents for detecting the presence of TGF alpha HIII in samples (e.g. by enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    182

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Local
```

```
This sequence encodes the BGF-like homologue PRO240. The invention relates to antibodies (Ab) that bind to any of the polypeptides (I) designated PRO187, PRO213, PRO214, PRO214, PRO216, PRO216, PRO216 or EBAF-2. The Ab, or other agents that inhibit expression and/or
                                                                                 302
                                                                                                                                                                     362
                                                                                                                                                                                                            581

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of CDNA (ATCC 97342) encoding human transforming growth factor alpha HIII (TGF alpha HIII, see AAM51083), a converse member of the TGF family. The CDNA was discovered in a human testis conveil in a human testis conveil in a human testis conveiles (including those comprising sequential deletions from either end of the present sequence) and polypeptides, vectors, host cells, and of the present sequence) and polypeptides, vectors, host cells, and contibulate and recombinant methods for producing the polypeptides. The TGF alpha HIII polypeptides and polymucleotides can be used in diagnostic methods for detecting disorders related to TGF alpha HIII, and also for therapeutic purposes, e.g. to stimulate wound healing to restore normal neutodogical functioning after trauma or AIDS dementia, to treat coular neutodogical functioning after trauma or AIDS dementia, to treat ocular clisorders, to target certain cells, to treat kidney and liver disorders, to promote hair follicular development, to stimulate angiogenesis for the treatment of burns, ulcers and corneal incisions, and to stimulate angiogenesis for the treatment of burns, ulcers and corneal incisions, and to stimulate clistic allergic reactions, cardiovascular diseases, disorders may also be treated e.g. by gene therapy. Methods are also provided for identifying agonists and antegonists of TGF alpha HIII. Antagonists may be used to inhibit the action of TGF alpha HIII. Antagonists and cancers, and osciasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                341
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         182

Claim 23; Fig 11; 309pp; English

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Sjogren's

This sequence represents a human PRO240 nucleotide sequence. PRO240 shares sequence homology with the D melanogaster serrate precursor protein and the Gallus gallus C-serrate-1 protein. The PRO240 gene is contained and the Gallus gallus C-serrate-1 protein. The PRO240 gene is located on chromosome 2. The invention relates to isolated antibodies which bind to a polypeptide. The "PRO" polypeptides are encoded by genes which bind to a polypeptide. The "PRO" polypeptides are encoded by genes comprising the nucleic acid encoding the antibodies. The antibodies are used in the production of the antibodies. The antibodies and nucleic acids encoding them are used for diagnosing a tumour calls and identifying compounds that inhibit a biological or immunological activity of and/or expression can appear to produce that inhibit a biological or immunological activity of and/or expression can appear to the product the antibody can be used in antibody dependent enzyme mediated product therapy (ADRPT) by conjugating the antibody to a prodrug activating enzyme which converts a prodrug to an antibodies can be fluorescently labelled and monitored by light the production of luorescently labelled and monitored by 11ght the production of luorescently labelled and monitored by 11ght the production of luorescently labelled and monitored by 11ght the production of luorescently labelled and monitored by 11ght the production of luorescently labelled and monitored by 11ght the production of luorescently labelled and monitored by 11ght the luorescently labelled and monitored by 11ght the luorescently labelled and monitored by 11ght the labelled and mon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     122

```
The present invention relates to PRO proteins and coding sequences. The present sequence is the coding sequence for one such PRO protein. It was found that the PRO genes are amplified in the genome of tumour cells. The gene amplification is expected to be associated with the overexpression of the gene product and contributes to tumourigenesis. Therefore, antagonists of PRO proteins are useful for the treatment of benign or malignant tumours, leukaemiss, lymphoid malignancies and other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, epithelial, inflammatory and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                     288
                                                                                                                                                                                                                                                                                                                                                                                                                        122
                                                                                                                                                                                                                                                                                                                                                                                                                                                           348

secreted and transmembrane Dolymphides FRO polymphides. The invention also comprises a method for producing the proteins of the invention by recombinant means and antibody may be used for detecting the PRO proteins of the invention. The antibody may be used for detecting the PRO proteins of the invention and may be used for detecting the PRO proteins of the invention and may be used for modify their activity. polymucleotides may be used as hybridisation probes for a DNA library to isolate the full-length PRO cDNA or to isolate other cDNAs, to construct hybridisation probes for mapping the gene which encodes that PRO and for genetic analysis of individuals with genetic disorders, in assays to identify other proteins or molecules involved in binding reaction, to generate transgenic animals or knock-out animals which in turn are useful in the development and screening of therappeutically useful reagents, for chromosome identification, and missue typing. The PRO polypeptides are useful in gene therapy, and and tissue typing. The PRO polypeptides are useful in gene therapy, and and missue typing the weight markers for protein clertrophoresis purposes. The sequences may also be used to detect overexpression on PRO polypeptides in cancerous tumours and for screening for differentially expressed genes using microarray technology. The

The invention relates to an isolated secreted and transmembrane polypeptide, designated as PRO polypeptide, PRO polypeptide lacking its associated signal peptide or PRO polypeptide extracellular domain with or without its associated signal peptide. The PRO polypeptide or an antibody binding to it is useful for inhibiting the growth of a tumor call. A composition containing a PRO polypeptide is useful for inhibiting a tumour, preferably cancer (such composition containing a PRO polypeptide is useful for inhibiting as liver, breast, ovarian, renal, colorectal, uterine, prostate, lung, bladder, gastric, pancreatic, vulval, thyroid, central nervous system cancer, hepatic carcinomas, sarcomas, alioharscomas, melanoma or leukaemia) in a mammal. The PRO polypeptide is useful for identifying its agonists. The PRO polypeptide or an antibody binding to it is useful in the proposition of a medicament for treating a condition which is responsive to the PRO polypeptide or an antibody binding to it. The PRO polypeptide or an antibody binding to it is also useful for treating neuronal, glain, astrocytal, hypothalamic, glandular, macrophagal, epithelial, stromal, blastocoelic, inflammatory, angiogenic and conding a immunologic disorders. The present sequence represents a cDNA encoding a proper propertion. Kabakoff RC; Novel isolated PRO polypeptides e.g. PRO240, PRO381, PRO540, useful treating tumor, preferably cancer, or for treating neuronal, glial, hypothalamic, stromal, inflammatory, angiogenic and immunologic disorders. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the projection or differentiation of chondrocyte cells and a method for proliferation or following the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also artisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in concarating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful are addicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microwascular endothelial cells, for inducing endothelial cell tube formation and for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. This sequence represents a human PRO polymucleotide of the invention.
                                                                                                                                                                                                                                                                                                             Human, gene, ss; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TNF-alpha; blood; chondrocyte cell; tumour; adremal; lung; colon; breast; prostate; rectum; cervix; liver; cancer; microvascular endothelial cell; endothelial cell tube formation; sports-related joint problem; articular cartilage defect; osteoarthritis; rheumatoid arthritis; osteopathic; antirheumatic; antiarthritic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated PRO1313, PRO20080 or PRO21383 polypeptide useful for stimulating proliferation of human microvascular endothelial cells, and PRO6018 polypeptide useful for stimulating proliferation of chondrocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Grimaldi JC;

The invention relates to an isolated secreted/transmembrane (PRO)

CT from any one of the 57 amino acid sequences given in specification, or to a sequence encoded by a nucleic acid molecule selected from any one of the 57 amino acid sequences given in specification, or to a sequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in specification, or a sequence having at least 80% identity to PRO in second from the second se
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        348
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     182

```

The invention relates to an isolated secreted/transmembrane (PRO) polypeptide, having at least 80% sequence identity to a sequence selected from any one of the 57 amino acid sequences given in specification, or to a sequence encoded by a nucleic acid molecule selected from any one of the nucleic acids deposited under any of the ATCC accession numbers given in specification, or a sequence having at least 80% identity to PRO lacking its associated signal peptide, an extracellular domain of PRO with or without its associated signal peptide. Also included are vectors, PROS, PRO fusion proteins, inducing endothelial cell tube formation (by administering PRO281, PRO160), PRO499, PRO499, PRO5308, PRO6000, PRO1027, PRO20313 or PRO34274 polypeptide or its agonist) and an oligonuclectide probe derived from any one of the above nucleotide sequences. PRO6018 polypeptide is useful for stimulating the

```
proliferation or differentiation of chondrocyte cells. PRO1313, PRO20080 cc and PRO21383 polypeptides are useful for stimulating the proliferation of human microwascular endothelial cells. PRO6071, PRO4087 and PRO6006 polypeptides are useful for inhibiting the proliferation of human microwascular endothelial cells. PRO polypeptides are useful for detecting the presence of tumour in a mamman, including tumours of lung, colon, breast, prostate, rectal, Kidney and liver. PRO281, PRO1560, PRO189, PRO499, PRO6000, PRO10275, PRO21207, PRO2033 and Colon, breast, properties are useful for inducing endothelial cell tube contaction. PRO or the antibody are useful in the preparation of a medicament for treating a condition responsive to PRO polypeptide. The coligonucleotide probes are useful for inducing genomic and cDNA, uncleotide sequences, for measuring or detecting the expression of an associated gene, and as antisense probes. PRO nucleic acid is useful as a contisense probes. PRO nucleic acid is useful as a missense probes. PRO nucleic acid is useful as a missense RNA and DNA, and for the preparation PRO polypeptides. PRO and CPRO nucleic acid are useful as therefour agents, e.g. vaccines. The present sequence encodes a PRO protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                183 GTAGTAATGCCTGGGACAATGTTACTTCTTTCAAGGACAAGCAGATTTGCCAAGGGCAAA 242
